

# A TEST: HELICOPTERS

**1: Take off & hover tail in over Take Off and Landing Point, with helicopter skids at 10 feet, for twenty seconds. Then land.**

**2: Take off & hover for five seconds, then hover slowly forwards 5 metres, stop & hover for five seconds.**

**3: Hover helicopter slowly sideways 5m to a position in front of the candidate. Stop & hover for five seconds.**

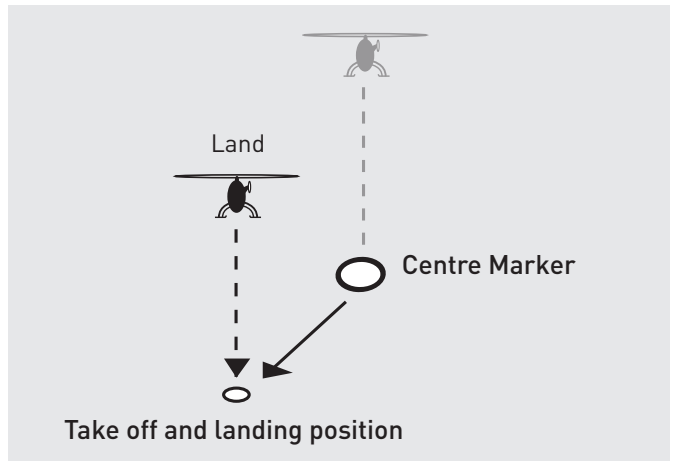

**4: Hover the helicopter slowly sideways in the opposite direction 10 metres (5 metres past the position in front of the candidate). Stop & hover for five seconds.**

5: Hover the helicopter slowly sideways in the first direction to bring it back to a position in front of the candidate. Stop & hover for five seconds.

6: Fly slowly backwards, bringing the helicopter back to its original position over the Take Off & Landing Point, Stop & hover for five seconds & land.

7: Take off and fly slowly forward 5 metres. Stop and hover for five seconds.

8: Lazy 8's. Fly forward along the flight line & perform two 'lazy eights', each at least 30 metres in length. Each time the helicopter passes in front of the candidate it must be sideways on, and throughout the manoeuvre the model must be flying forwards rather than sideways. The end turns must be made away from the flight line!

6: At conclusion of 2 'lazy eights', bring the helicopter to a halt sideways-on over the Centre Marker. Turn the model tail in to the candidate & hover for five seconds. Then hover backwards to the Take Off and Landing Position & land.
